QUINOLINE AND CINNOLINE DERIVATIVES AND THEIR APPLICATIONS

CROSS-REFERENCE TO RELATED APPLICATIONS

This application is the U.S. National Stage entry of PCT/CN2012/001640, filed Dec. 7, 2012, which claims the benefit of Chinese Patent Application No. 201110453555.8, filed Dec. 30, 2011 and Chinese Patent Application No. 201210111920.1, filed Apr. 17, 2012, the disclosures of each are herein incorporated by reference.

FIELDS OF THE INVENTION

The present invention relates to a new series of quinoline and cinnoline derivatives, pharmaceutically acceptable salts, hydrates, solvates or prodrugs and the processes for their preparation and pharmaceutical compositions containing the compounds. Wherein said quinoline and cinnoline derivatives shows potent inhibitory activity against c-Met kinase. The present invention further relates to the uses of the compounds, pharmaceutically acceptable salts, hydrates, solvates or prodrugs for the preparation of medicaments for the treatment and/or prevention of diseases caused by abnormal expression of c-Met kinase, especially for treatment and/or prevention of cancer.

BACKGROUND OF THE INVENTION

Cancer is a serious hazard to human life and health. With the changes of external factors such as environmental pollution, the number of cancer cases is rising year by year. According to World Health Organization statistics, about 10 million tumor patients are diagnosed worldwide each year currently, and 7 million people die of cancer related diseases, therefore, malignant tumor has become human's second largest killer which is second only to cardiovascular disease.

Protein kinase (PKs), a kind of enzyme, catalyzes phosphorylation of hydroxyl on tyrosine, serine, and threonine residues through the transfer of the end of ATP (γ) phosphate. Through signal transduction pathways, these enzymes regulate cell growth, differentiation and proliferation. Therefore, all aspects of cell cycle are dependent on the activity of PKs substantially. Furthermore, PKs abnormal activity is associated with the host of disease, ranging from relatively non-life threatening diseases (e.g.: psoriasis) to extremely fatal diseases (e.g., glioblastoma). Protein kinases include two types: Protein tyrosine kinase (PTK) and Serine-threonine kinase (STK).

One of the main aspects of PTK activity is to participate as cell-surface protein growth factor receptor. The growth factor receptor turns into an activated form, which interacts with the protein on the inner surface of cell membrane, through combining with growth factor ligand. It leads to phosphorylation of receptor and other protein tyrosine residue, and the formation of multiple cytoplasmic signaling molecule complexes which affects cell reaction, such as division (proliferation), differentiation, growth, metabolism etc.

Growth factor receptor with PTK activity is called receptor tyrosine kinase (RTK), which includes a big family of trans-membrane receptor with multiple biological activities. Met is

2

one of the members of this family, and is often referred to as c-Met or human hepatocyte growth factor receptor tyrosine kinase (hHGFR). As a kind of oncogene, the overpass or down regulation of c-Met lead to tumor growth and invasion. Therefore, the expression of c-Met is believed to play a role in tumor cell growth and migration in the early. Stimulated by ligand HGF (also known as Scatter Factor), c-Met starts a variety of physiological processes containing cell proliferation, motility, differentiation, angiogenesis, wound healing, tissue regeneration, embryonic development. Stimulation of hepatocyte growth factor makes c-Met receptor rapidly internalized via clathrin coated vesicles, and gather around cell nucleus by early transportation of endosomes cavity.

Down regulation, dysregulation, overexpression, mutation of c-Met and/or HGF are associated with uncontrolled cell proliferation and survival, which plays an important role in tumor cell invasion, growth and migration in the early. For this reason, c-Met becomes an important target for anticancer drug development.

Overexpression of c-Met and HGF is related to poor diagnosis of prognosis. There is also evidence to support that HGF, as modifier play a role in cancer occurrence, invasion and metastasis (Review: Herynk, M. H. et al. Radinsky, R. (2000) *In Vivo* 14:587-596). According to latest data, inhibition of tumor growth, survival and invasion is associated with inhibition of the combination between c-Met and HGF and dimerization of c-Met receptor (Michieli et al. (2004) *Cancer Cell* 6: 61-73). Patents (US 2005/0037431 and US 2004/0166544) describe the inhibition of c-Met in tumor xenotransplantation mouse model to slow down the growth of tumor, and the specific antibodies for c-Met have been expressed to block the binding of HGF to c-Met. The overexpression of c-Met also occurs in NSCLC, small cell lung cancer, lung cancer cell, breast cancer cell, colon cancer cell and prostate cancer cell. Because c-Met seems to play an important role in the formation of multiple tumors, a variety of strategies have been used to inhibit this receptor tyrosine kinase.

By adjusting the HGF β chain binding to c-Met can affect the regulation of HGF/c-Met signaling pathway. In a particular embodiment, zymogen form HGF β mutant shows 14 times lower affinity to c-Met than to wild-type serine protease form, which suggests that conformational change in singlestranded form of cleaved can lead to best interaction. The extensive mutation of active site of serine protease and the active area of HGF β show that among 38 purified double stranded HGF mutants, there are 17 damaged cells moving or phosphorylated but combining with c-Met. However, the decrease of biological activity is associated with the decrease of c-Met binding to its own mutant HGF β mutant, and the elimination of the dominant role of α -chain binding.

Foretinib (Fig. 1), reported as a quinoline compounds, is an oral c-Met and VEGFR/KDR kinase inhibitor with IC_{50} values of 0.4 and 0.8 nM to c-Met and KDR, respectively, and has entered phase II clinical research stage. Clinical studies have shown that, Foretinib showed a significant inhibitory effect against a variety of human tumor cell lines (such as human lung cancer cells, human gastric cancer cells, etc.), with an IC_{50} values of 0.004 μ g/mL.

Based on the prior art references, the inventor designs and synthesizes a new series of quinoline and cinnoline derivatives, which are shown to possess antitumor activity by in vitro screening assay.

SUMMARY OF THE INVENTION

The present invention relates to a series of quinoline and cinnoline derivatives of general formula I, pharmaceutically acceptable salts, hydrates, solvates or prodrugs thereof,

According to some general methods involved in the field of the invention, the term “pharmaceutically acceptable salts” as used herein refer to a pharmaceutically acceptable salt formed by quinoline and cinnoline derivatives defined as formula I reacted with acid. The acid includes inorganic or organic acids, and those salts formed by using the following acids are especially preferable: hydrochloric acid, hydrobromic acid, sulphuric acid, phosphoric acid, methanesulfonic acid, ethanesulfonic acid, toluenesulfonic acid, benzenesulfonic acid, naphthalene disulfonic acid, acetic acid, propionic acid, lactic acid, trifluoroacetic acid, maleic acid, citric acid, fumaric acid, oxalic acid, tartaric acid or benzoic acid.

In addition, the present invention includes the prodrugs of the derivatives of present invention. According to present invention, the prodrugs are the derivatives of general formula I, and the prodrugs have low biological activity or even have no biological activity, but which can be converted to a corresponding biologically-active form (e.g. by metabolism, solvolysis or other ways) under physiological conditions upon administration.

In addition, the present invention includes the prodrugs of the derivatives of present invention. According to present invention, the prodrugs are the derivatives of general formula I, and the prodrugs have low biological activity or even have no biological activity, but which can be converted to a corresponding biologically-active form (e.g. by metabolism, solvolysis or other ways) under physiological conditions upon administration.

Unless indicated otherwise, the term “halogen” refers to fluorine, chlorine, bromine or iodine atom; “alkyl” refers to a straight or branched alkyl; “alkylene” refers to a straight or branched alkylene; “cycloalkyl” refers to substituted or unsubstituted cycloalkyl; “aryl” refers to unsubstituted or substituted phenyl; “heteroaryl” comprises one or more heteroatoms selected from O, N and S, and may be one or more rings, and the ring system is aromatic and can be exemplified by imidazolyl, pyridinyl, pyrazolyl, (1,2,3)- and (1,2,4)-triazolyl, furanyl, thienyl, pyrrolyl, thiazolyl, benzothiazolyl, oxazolyl, isoxazolyl, naphthyl, quinolyl, isoquinolyl, benzimidazolyl, benzoxazolyl and the like. “Saturated or partially

11

saturated heterocyclic group" refers to groups containing one or more heteroatoms selected from N, O, S monocyclic or polycyclic ring system, such as pyrrolidinyl, morpholinyl, piperazinyl, piperidinyl, pyrazolidinyl, imidazolidinyl and thiazolyl group.

The present invention further relates to a pharmaceutical composition, comprising quinoline and cinnoline derivatives as shown by general formula I, and pharmaceutically acceptable salts, hydrates, solvates or prodrug thereof as active ingredient, and pharmaceutically acceptable carrier or excipients if necessary. The pharmaceutically acceptable excipients refer to any diluents, adjuvants and carrier that can be usable in pharmaceutical field. The derivatives in this present invention can be combined with other active ingredients as long as they are not deleterious to the recipient thereof, such as allergic action.

The clinical dose of quinoline and cinnoline derivatives of formula I required to be effective, will, of course, be varied. The factors to be considered include the therapeutic efficacy and bioavailability in vivo of the active ingredients, the rate of metabolism and discretion of them, the patient's age, sex and the period of disease. However, a suitable effective dose is in the range of about 10 to 1000 mg per day, preferably in the range about 50 to 500 mg per day. So, When the pharmaceutical compositions of the invention are formulated in a unit dosage form, considering the effective dose mentioned above, the amount of quinoline and cinnoline derivatives of formula I contained in each unit of pharmaceutical preparation is in the range of about 10 to 500 mg, preferably in the range of about 50 to 300 mg. According to the instructions of doctors or physician, the preparation can be administered several times at intervals (preferable once to six times).

The pharmaceutical composition of present invention could be prepared into various formulations comprising several excipients commonly used in the pharmaceutical art, for example, injectable formulation, tablet, capsule, aerosol, suppository, membrane, guttate pills, linimentum, ointment and so on.

The carrier useful for the pharmaceutical composition of present invention is those commonly used in the pharmaceutical field, including adhesive, lubricant, disintegrating agent, cosolvent, diluents, stabilizer, suspending agent, pigment, flavoring agent, preservatives, diluent sand matrix. The pharmaceutical formulation may be administrated by oral or parenteral pathway (e.g. intravenous, subcutaneous, intraperitoneal or topical), and could be prepared into enteric coated tablet in case some medicines are unstable in the conditions of stomach.

The active compounds or pharmaceutically acceptable salts or solvates of the present invention thereof can be used for the only antiproliferative drug alone, or be combined with already listed antiproliferative drug for the treatment and/or prevention of proliferative diseases, such as psoriasis, benign prostatic hypertrophy, atherosclerosis and restenosis.

We have found the compounds of present invention have an inhibitory activity on tumor cell growth. Hence, the compounds can be useful for the preparation of medicaments for treating and/or preventing cancer diseases, such as breast, lung, liver, kidney, colon, rectum, stomach, prostate, bladder, uterus, pancreas, bone marrow, testes, ovaries, lymph node, soft tissue, head and neck, thyroid, esophageal, leukemia, neurocytoma and so on.

According to the test against H460 (human lung cancer), HT-29 (human colon cancer), U87MG (human glioblastoma), MKN-45 (human gastric cancer) and SMMC-7721 (human liver cancer), compounds of the present invention showed significant inhibition on lung cancer, colon cancer

12

and gastric cancer cell lines. Therefore, the said compounds can be especially useful for the preparation of medicaments for treating and/or preventing of lung cancer and colon cancer.

According to the test against c-Met, compounds of the present invention showed significant inhibition to c-Met kinase, and showed potent inhibition to lung cancer cells, colon cancer cells with high expression of c-Met. Therefore, the said compounds can be especially useful for the preparation of medicaments for treating and/or preventing of lung cancer.

The active compounds, pharmaceutically acceptable salts or solvates of the present invention may be used as a single anticancer medicament, or used in combination with anticancer drugs listed (Platinum drug, cisplatin; camptothecin drug irinotecan; vinca alkaloid drug, Navelbine; deoxycytidine celecoxib drug, gemcitabine; etoposide, paclitaxel, etc.). Such a combined therapy can be achieved by administrating respective therapeutic components simultaneously, subsequently or separately.

The following Examples and Preparation Examples are provided to further illustrate and exemplify the compounds of the invention and preparation methods thereof. It shall not be understood that the following Examples and Preparation are intended to limit the scope of the invention in any way.

The following Route 1 illustrates the preparation of the compounds of general formula I of the present invention, wherein all starting materials can be prepared by the methods depicted in the Schemes or the methods well known to one of ordinary skill in the organic chemistry art, or are commercially available. All of the final compounds of the present invention are prepared by the methods depicted in the Schemes or similar methods, and these methods are well known to one of ordinary skill in the organic chemistry art. All variable factors as involved in these Schemes are defined as follows or defined as in claims.

In those five routes, all substitutes including R₁, R₂, R₃, and R₅ in all intermediates are defined as claims in this invention.

EMBODIMENTS

The following Examples aim to illustrate rather than limit the scope of the invention. The nuclear magnetic resonance hydrogen spectrum (HNMR) of the produced compounds of the invention was determined by Bruker ARX-600 (Supplied by Leaman China), and mass spectrum (MS) was determined by Agilent 1100 LC/MSD (Supplied by Agilent China); all reagents were analytically pure or chemically pure.

Example No. 1

N-(3-fluoro-4-(((6-methoxy-7-(3-(pyrrolidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2-(trifluoroethyl)phenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide dihydrochloride

Step A

1-(4-(3-chloropropoxy)-3-methoxyphenyl)ethanone
(Intermediate II)

A stirred solution of 1-(4-hydroxy-3-methoxyphenyl)ethanone (600 g, 3.61 mol, Purchased from Shanghai Bangcheng Chemical Co., Ltd.) and anhydrous potassium carbonate (698 g, 5.055 mol) in 2500 mL of N,N-dimethylformamide was

added drop-wise with an N,N-dimethylformamide solution of 1-bromo-3-chloropropane (795.9 g, 1.4 mol) while maintaining the temperature below 25° C. Then the resulted mixture was kept at 25° C. for 10 h. After completion of the reaction, the precipitate was filtered and the filter cake was washed by a small amount of N,N-dimethylformamide. The filtrate was poured into ice water slowly with vigorous stirring. The precipitate was filtered, washed with water, and dried to give 827.2 g solid. Yield: 93.8%.

Step B

1-(4-(3-chloropropoxy)-5-methoxy-2-nitrophenyl)ethanone (Intermediate III)

To a solution of intermediate II (200 g, 0.82 mol) in dichloromethane (5 v/w, 1000 mL), fuming nitric acid (130 g, 2.06

65

41

mol) was added drop-wise at a rate to maintain the reaction temperature below -10°C . Upon the completion of addition, the mixture was stirred for 2 h at -10 – -20°C . After completion of the reaction, the reaction mixture was poured slowly into ice water, and the organic layer was separated and washed with brine until the aqueous layer became neutral, then dried with anhydrous sodium sulphate. The solution was evaporated to give 210 g of yellow solid. Yield: 89%.

Step C

(E)-1-(4-(3-chloropropoxy)-5-methoxy-2-nitrophenyl)-3-(dimethylamino)prop-2-en-1-one (Intermediate IV)

To 1000 mL of toluene (5 v/w) were added 0.695 mol of intermediate III (200 g) and the mixture was heated to 110°C . to intermediate III completely dissolved. Then 3.476 mol of N,N-dimethylformamide dimethyl acetal (414.2 g) was added, and the reaction was heated to reflux for 16 h. After completion of the reaction, the resulting precipitate from the cooled reaction mixture was filtered to obtain the target compound as a yellow powder (180 g). Yield: 75.8%.

Step D

7-(3-chloropropoxy)-6-methoxyquinolin-4(1H)-one (Intermediate V)

0.44 mol of (E)-1-(4-(3-Chloropropoxy)-5-methoxy-2-nitrophenyl)-3-(dimethylamino)prop-2-en-1-one (intermediate IV) (150 g) was dissolved in 1200 mL of glacial acetic acid (8 v/w), and the mixture was heated to 40°C . After intermediate IV was completely dissolve, 2.20 mol (123.1 g) Iron powder was added slowly, then the reaction mixture was heated to 80°C . with mechanical stirring for 2 h. After completion of the reaction, the reaction mixture was filtered immediately to remove iron powder. The filtrate was collected and cooled to precipitate solid, and then filtered to give yellow solid, which was dissolved in glacial acetic acid and the solution was stirred at 80°C . for 30 min then filtered immediately again. The filtrate was cooled to precipitate solid, filtered, and the filter cake was washed with water until the aqueous layer became neutral, dried to give solid 79 g. Yield: 65%.

Step E

6-methoxy-7-(3-(pyrrolidin-1-yl)propoxy)quinolin-4(1H)-one (Intermediate VI)

To 620 mL of acetonitrile were added 0.232 mol (62 g) of intermediate V, and 1.16 mol of pyrrolidine (82.46 g), then the reaction mixture was heated to reflux for 8 h. After completion of the reaction, most of the solvent was evaporated, the raffinate was put in cold trap to precipitated solid, then filtered and the filter cake was washed with ethyl acetate to give solid 66.74 g. Yield 95.3%.

Step F

4-chloro-6-methoxy-7-(3-(pyrrolidin-1-yl)propoxy)quinoline (Intermediate VII)

To 315 mL of acetonitrile (5 v/w) were added 0.198 mol (63 g) of intermediate VI, 315 ml of phosphorus oxychloride (5 v/w), then the reaction mixture was heated to 85°C .

42

refluxed for 6 h. After completion of the reaction, the mixture was evaporated to give gray viscous solid, which was poured into plenty of ice water, adjusted to pH 10 with 10% solution of potassium hydroxide, extracted with methylene dichloride. The organic layer was collected and dried with anhydrous sodium sulfate, and evaporated in vacuo to give solid 58 g. Yield: 87.3%.

Step G

4-(2-fluoro-4-nitrophenoxy)-6-methoxy-7-(3-(pyrrolidin-1-yl)propoxy)quinoline (Intermediate VIII)

To 250 mL of anhydrous chlorobenzene (5 v/w) were added 0.234 mol (36.73 g) of 2-fluoro-4-nitrophenol. The reaction mixture was heated to 145°C . then added 0.2 mol (62.5 g) of intermediate VII. The reaction was kept at this temperature for 20 h. After completion of the reaction, the reaction mixture was evaporated in vacuo to give gray solid, which was dissolved with methylene dichloride and washed with saturated potassium carbonate solution. The organic layer was dried, evaporated and recrystallized with ethanol to give solid 49.26 g. Yield: 71.4%.

Step H

3-fluoro-4-((6-methoxy-7-(3-(pyrrolidin-1-yl)propoxy)quinolin-4-yl)oxy)aniline (M-1)

To 1210.5 mL of 90% ethanol (25 v/w) were added 1.1 mol (61.42 g) of Iron powder, 6 mL of hydrochloric acid, then the reaction mixture was heated to 80°C . with stirring and kept this temperature for 15 min. After that, the reaction mixture was added portionwise 0.11 mol (48.42 g) intermediate VIII, then refluxed for 2 h. After completion of the reaction, the reaction mixture was filtered without cooling. The filtrate was collected and evaporated to give yellow solid 43 g. Yield: 95%.

Step I

2-fluorobenzoyl chloride (Intermediate a)

To 100 mL of toluene were added 0.714 mol of 2-fluorobenzoic acid (100 g) then the mixture was heated to 50°C . and added 5.7 mol (414 mL) sulfoxide chloride. The reaction mixture was refluxed for 7 h. After completion of the reaction, sulfoxide chloride was evaporated to give 2-fluorobenzoyl chloride 79 g. Yield: 70%.

Step J

5-(2-fluorobenzoyl)-2,2-dimethyl-1,3-dioxane-4,6-dione (Intermediate b)

To 300 mL of dichloromethane were added 82.6 g (0.574 mol) of 2,2-dimethyl-1,3-dioxane-4,6-dione, 87.5 g (0.7172 mol) of N,N-dimethylpyridin-4-amine with stirring. The mixture was cooled to 0°C . with ice-water bath, then was added a solution of 100 g (0.631 mol) intermediate a in 200 mL of dichloromethane dropwise. Upon the completion of addition, the reaction mixture was stirring at 0 – 5°C . for 2 h, and room temperature for another 2 h. After completion of the reaction, the reaction liquid was washed with 10% hydrochloric acid and water, then dried and evaporated to give solid 80 g. Yield: 50%.

43

Step K

Ethyl 3-(2-fluorophenyl)-3-oxopropanoate
(Intermediate c)

To a mixture of 400 mL of ethyl alcohol and 200 mL of toluene were added 80 g of intermediate b. The reaction mixture was refluxed for 10 h. After completion of the reaction, the solvent was distilled off under reduced pressure to give black liquid 50 g. Yield: 78%.

Step L

(E)-3-(2-fluorophenyl)-3-oxo-2-(2-(trifluoromethyl)phenyl)hydrazono propionate (Intermediate d)

To 50 mL of 20% hydrochloric acid were added 10 g (0.06 mol) of 2-(trifluoromethyl)aniline. The mixture was cooled to 0° C., and a cold solution of 8.54 g (0.123 mol) of sodium nitrite in 200 mL of water was added dropwise with the reaction temperature being kept 0-5° C., then the reaction was kept at this temperature for 30 min. This reaction liquid was to be used directly later. To 200 mL of ethyl alcohol was added 10.2 g (0.124 mol) of sodium acetate and 10 g (0.0476 mol) of intermediate c. The mixture was cooled to 0° C., then added the diazonium salt solution prepared above dropwise with the reaction temperature being kept at 0-5° C. After that, the reaction mixture was kept at this temperature for 1 h. After completion of the reaction, the reaction mixture was filtered. The filter cake was washed with water, dried to give yellow solid 12 g. Yield: 70%.

Step M

4-oxo-1-(2-(trifluoromethyl)phenyl)-1,4-dihydrocinnoline-3-carboxylate (Intermediate e)

To 120 mL of anhydrous ethanol were added 15 g (0.039 mol) of intermediate d and 6.5 g (0.047 mol) of anhydrous potassium carbonate, the reaction mixture was refluxed for 5 h. After completion of the reaction, the reaction mixture was cooled and filtered to remove potassium carbonate, the filter cake was washed with a small amount of ethanol. The filtrate was concentrated then poured into 50 mL of water, adjusted to pH 5-6 with 15% hydrochloric acid, and precipitated a large amount of solid. The mixture was filtered, and the filter cake was washed with water then dried to give solid 12 g. Yield: 80%.

Step N

4-oxo-1-(2-(trifluoromethyl)phenyl)-1,4-dihydrocinnoline-3-carboxylic acid (Intermediate f)

To 160 mL of alcohol were added 10 g (0.027 mol) of intermediate e, 50 ml of 10% aqueous sodium hydroxide was added dropwise then the reaction was kept at room temperature for 5 to 8 h. After completion of the reaction, The reaction mixture was concentrated and poured into water, then adjusted to pH 5-6 with 15% hydrochloric acid, the precipitated solid was filtered and dried to give Intermediate f 7 g. Yield: 75%.

Step O

4-oxo-1-(2-(trifluoromethyl)phenyl)-1,4-dihydrocinnoline-3-carbonyl chloride (Q-1)

To 80 mL of sulfoxide chloride was added 10 g (0.03 mol) of intermediate f. The reaction mixture was refluxed for 8 h.

44

After completion of the reaction, the excess sulfoxide chloride was evaporated to give intermediate Q-118.5 g. Yield: 81%.

Step P

N-(3-fluoro-4-((6-methoxy-7-(3-(pyrrolidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-4-oxo-1-(2-(trifluoromethyl)phenyl)-1,4-dihydrocinnoline-3-carboxamide dihydrochloride

Example 1

To 10 mL of anhydrous dichloromethane was added 0.2 g (0.48 mmol) intermediate M-1, 0.58 mmol of intermediate Q-1, 0.07 g (0.58 mmol) N,N-diisopropylethylamine. The mixture was stirring at room temperature for 10 h. After completion of the reaction, the organic layer was washed with 5% aqueous solution of potassium carbonate and brine, dried with anhydrous magnesium sulfate and evaporated to give gray solid 0.28 g, which was dissolved in 10 mL of acetone. The solution was added drop-wise acetone saturated solution of hydrochloric acid (2 mL) under the ice bath and precipitated large amount of solid. Upon the completion of addition, the mixture was stirred for 0.5 h, and then filtered, the filter cake was washed with acetone, dried to give target compound N-(3-fluoro-4-((6-methoxy-7-(3-(pyrrolidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-4-oxo-1-(2-(trifluoromethyl)phenyl)-1,4-dihydrocinnoline-3-carboxamide dihydrochloride (example 1) 0.3 g. Yield: 83.2%.

ESI-MS [M+H] (m/z): 727.7; ¹H NMR (300 MHz, DMSO) δ 11.84 (s, 1H), 8.85 (d, J=6.5 Hz, 1H), 8.38 (d, J=7.8 Hz, 1H), 8.20-8.04 (m, 3H), 8.04-7.95 (m, 2H), 7.94-7.83 (m, 2H), 7.80 (s, 1H), 7.77-7.61 (m, 3H), 7.06 (dd, J=10.4, 7.8 Hz, 2H), 4.38 (t, J=5.6 Hz, 2H), 4.05 (d, J=12.1 Hz, 3H), 3.66-3.52 (m, 4H), 3.06 (s, 2H), 2.36 (s, 2H), 1.99 (m, 4H).

According to the methods in example 1, substituted intermediate Q-1 can be obtained by four steps including diazotization using different-substituted phenyl amine and intermediate c, which reacts with different-substituted M-1 to give compounds 2-45.

Example 2

N-(3-fluoro-4-((6-methoxy-7-(3-(piperidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2-chlorophenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide dihydrochloride

Step Q

(E)-3-(dimethylamino)-2-(2-fluorobenzoyl)acrylate (g)

A mixture of intermediate c (19 g, 0.08 mol), and DMF-DMA (0.64 mol, 97 ml), was heated to 50° C. kept at this temperature for 4 h. After completion of the reaction, the solvent was evaporated in vacuo, to give brown oil 18.8 g, 80% Yield.

Step R

(E)-ethyl-2-(2-fluorobenzoyl)-3-((4-fluorophenyl)amino)acrylate(h)

To 35 mL of toluene (5 v/w) were added intermediate g (7 g, 0.025 mol), 4-fluoroaniline (1.2 g, 0.030 mol), the reaction mixture was stirred under reflux for 10 h. After completion of the reaction, the solvent was evaporated in vacuo to give yellow oil, which was stirred in anhydrous ether for 0.5 h, the precipitate was filtered, dried to obtain white solid 6.5 g. Yield: 70%.

52

Step S

1-(4-fluorophenyl)-4-oxo-1,4-dihydroquinoline-3-carboxylate (j)

To 120 mL of anhydrous ethylalcohol (8 v/w) were added intermediate h (14 g, 0.039 mol) and potassium carbonate (6.5 g, 0.047 mol), the mixture was stirred at room temperature for 5 h. After completion of the reaction, the reaction mixture was filtered, and the filter cake was washed with a small amount of ethylalcohol, then the filtrate was concentrated and poured into water and adjusted to pH 5-6 with 6 N HCl. The precipitate was filtered, washed with water, and dried to obtain solid 11 g. Yield: 80%.

Step T

1-(4-fluorophenyl)-4-oxo-1,4-dihydroquinoline-3-carboxylic acid (k)

To a solution of intermediate j (5 g, 0.013 mol) dissolved in ethylalcohol (50 ml, 10 v/w) was added 1N NaOH aq (100 ml). The mixture was stirred at room temperature for 3 h. After completion of the reaction, the solvent was evaporated in vacuo, and the residue was poured into water (50 ml) and extracted with CH₂Cl₂ (150 mL*4). Then the aqueous layer was separated and acidified to pH 6 with 6N aqueous hydrochloric acid, then stirred at room temperature for 0.5 h, and the precipitate was filtered to give white solid 2.8 g. Yield: 60%.

Step U

1-(4-fluorophenyl)-4-oxo-1,4-dihydroquinoline-3-carbonyl chloride (Q-2)

A mixture of intermediate k 2 g (0.007 mol) and sulfoxide chloride (20 mL) was heated to reflux for 6 h, the excess sulfoxide chloride was evaporated in vacuo to obtain white solid 2 g. Yield: 95.1%.

Step V

N-(3-fluoro-4-(((6-methoxy-7-(3-(4-methylpiperazin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(4-fluorophenyl)-4-oxo-1,4-dihydroquinoline-3-carboxamide dihydrochloride (Example 46)

A mixture of intermediate M-1 (0.2 g, 0.48 mmol), intermediate Q-2 (0.58 mmol) dissolved in anhydrous CH₂Cl₂ (10 mL), N,N-diisopropylethylamine (0.07 g, 0.58 mmol) was stirred at room temperature for 10 h. After the reaction is complete, the dichloromethane layer was washed with 5% aqueous solution of K₂CO₃, brine in sequence, dried with anhydrous magnesium sulfate. The solvent was evaporated in vacuo to obtain gray solid 0.26 g, which was dissolved in acetone (10 mL), and to the mixture was added drop-wise acetone saturated solution of hydrochloric acid (2 mL) under the ice bath. Upon the completion of addition, the resulting precipitate was stirred for 0.5 h, and then filtered, washed with acetone, dried to give target compound 0.26 g. Yield: 80%.

Step W

1-(2-amino-4-(3-chloropropoxy)-5-methoxyphenyl)ethanone (Intermediate IX)

To 600 mL of 95% ethylalcohol was added intermediate III (72 g, 0.25 mol) and the mixture was heated to 60° C. Iron powder (112 g, 2 mol) was added to the mixture portion wise. After the completion of addition, the mixture was added drop-wise hydrochloric acid (2 mL) and heated to reflux for 3 h. After the completion of addition, the reaction mixture was filtered without cooling, the filtrate was cooled to room temperature to give precipitate, which was filtered to get off white solid 45 g. Yield: 70%.

Step X

7-(3-chloropropoxy)-6-methoxy-cinnoline-4-one (Intermediate X)

To a mixture of intermediate IX (25.7 g, 0.1 mol) and 200 mL hydrochloric acid (2 mol/L) was added drop-wise 50 mL of the aqueous solution of sodium nitrite (0.2 mol) with the temperature at 0° C. After the completion of addition, the mixture went to room temperature for 4 h, and then heated to 75° C. for 2 h. After the completion of addition, the reaction mixture was cooled, and filtered to give solid which was dissolved in 10% aqueous NaOH (100 mL), adjusted to pH 7 with 2 mol/L HCl aq.. The precipitate was filtered to obtain grey solid 23 g. Yield: 85%.

Step Y

6-methoxy-7-(3-(piperidin-1-yl)propoxy)cinnoline-4-one (Intermediate XI)

A mixture of intermediate X (26.8 g, 0.1 mol), acetonitrile (300 mL), piperidino (42 g, 0.5 mol) was heated to reflux for 4 h. After the reaction is complete, the solvent was evaporated in vacuo, the residue was poured into plenty of ether, stirred for 2 h at room temperature. The precipitate was filtered to obtain white solid 30 g. Yield: 94%.

Step Z

4-(2-fluoro-4-nitrophenyl)-6-methoxy-7-(3-(piperidin-1-yl)propoxy)cinnoline (Intermediate XII)

To a solution of intermediate XI (37 g, 0.1 mol) in DMF (350 mL) was added potassium tert-butoxide portionwise at room temperature, the mixture was stirred for 0.5 h, then 3,4-difluoronitrobenzene (17.5 g, 0.11 mol) was added, and

56

the mixture was heated to 90° C. for 2 h. After completion of the reaction, the reaction mixture was filtered without cooling. The filtrate was dissolved in 1000 mL water, to obtain yellow solid 40 g. Yield: 87%.

Step Z-a

3-fluoro-4-((6-methoxy-7-(3-(piperidin-1-yl)propoxy)cinnoline-4-yl)oxy)aniline (M-2)

A stirring solution of intermediate XII (23 g, 0.05 mol) and 95% ethylalcohol (300 mL) was heated to 60° C., then Iron powder (22 g, 0.4 mol) and hydrochloric acid (1 mL) were added portionwise to the reaction mixture, which was heated to reflux for 3 h. After completion of the reaction, the resulting reaction mixture was filtered without cooling. The filtrate was cooled to room temperature to give precipitate, which was filtered to get yellowish white solid 19 g. Yield: 89%.

Step Z-b

N-(3-fluoro-4-((6-methoxy-7-(1-piperidin-1-yl)propoxy)cinnoline-4-yl)oxy)phenyl)-1-(2-fluorophenyl)-4-oxo-1,4-dihydrocinnolinyl-3-carboxamide (Example 61)

To a mixture of intermediate M-2 (0.2 g, 0.48 mmol) and intermediate Q-1 (0.58 mmol) in anhydrous CH₂Cl₂ was added N,N-diisopropylethylamine (0.07 g, 0.58 mmol), and the reaction mixture was stirred at room temperature for 10 h. After completion of the reaction, the organic layer was washed with 5% aqueous solution of potassium carbonate, brine in sequence, dried with anhydrous magnesium sulfate. The solvent was evaporated in vacuo to obtain target compound N-(3-fluoro-4-((6-methoxy-7-(1-piperidin-1-yl)propoxy)cinnoline-4-yl)oxy)phenyl)-1-(2-fluorophenyl)-4-oxo-1,4-dihydrocinnolinyl-3-carboxamide 0.27 g. Yield: 81%.

ESI-MS [M+H] (m/z): 692.7; ¹H NMR (300 MHz, DMSO) δ 11.84 (s, 1H), 8.93 (d, J=6.5 Hz, 1H), 8.52 (d, J=7.2 Hz, 1H), 8.33 (dd, J=12.8, 2.1 Hz, 1H), 7.99-7.86 (m, 2H), 7.85-7.78 (m, 3H), 7.78-7.70 (m, 3H), 7.65 (t, J=8.8 Hz, 1H), 7.10 (d, J=8.6 Hz, 1H), 7.02 (d, J=6.4 Hz, 1H), 4.37 (t, J=5.8 Hz, 2H), 4.07 (s, 3H), 3.50 (d, J=11.6 Hz, 4H), 2.92 (d, J=9.6 Hz, 2H), 2.38 (d, J=6.5 Hz, 2H), 1.81 (t, m, 6H).

According to the methods in example 61, substituted M-2 can be synthesized by five steps containing reduction, cyclization reaction with intermediate III as starting material, which then reacts with substituted Q-1 to get compound 62-70.

The anti-tumor activity research of the compounds of this invention.

In Vitro Anti-Tumor Cellular Activity.

The in vitro inhibitory activity of the quinoline and cinnoline derivatives described as formula I in this patent was evaluated against the cancer cell lines H460 (human lung cancer cell), HT-29 (colon cancer cell), U87MG (Human malignant glioblastoma cells), MKN-45 (human gastric carcinoma cell), SMMC-7721 (hepatoma cell).

(1) After recovery and passaged 2-3 times stable, the cells were digested with trypsin solution (0.25%) from the bottom of culture bottle. After pouring the cell dissociation buffer to the centrifugetube, nutrient solution was added to stop digestion. The centrifugetube were centrifuged for 10 min under 800 r/min, the liquid supernatant was removed, 5 mL culture solution was added, after mixing by pipetting the cell, took 10 μL cell suspension to the cell counting plat, and adjusted the cell concentration to 10⁴/well. Among the 96 wells, A1 is empty, 100 μL of cell suspension were added to the other wells. The 96 well plates were incubated in the incubator for 24 h.

(2) 50 μL dimethyl sulfoxide was used to dissolve the test samples, and then a suitable amount of culture media was added so as to reach a final concentration of 2 mg/mL. Then the samples were diluted to 20, 4, 0.8, 0.16 0.032 μg/mL in a 24-well plate, respectively.

There were three wells for each concentration, wherein the cell growth in the surrounding two rows and columns was significantly influenced by environments and thus only taken as blank cell wells. The 96-well plates were placed in an incubator and cultivated for 72 hours.

(3) The culture media containing the compounds in the 96-well plates was discarded, and the cells were washed with phosphate buffered solution (PBS) twice. Each well was added with 100 μL MTT (tetrazole) (0.5 mg/mL), and then placed in an incubator to incubate for 4 hours, after which MTT solution was discarded and 100 μL dimethyl sulfoxide was added thereto. The reaction product of survival cells with MTT, i.e. formazan, was dissolved completely by oscillation on a magnetic oscillator, then placed into a microplate reader to measure the results, and the IC₅₀ values of compounds could be deduced by Bliss method.

As illustrated in Table 1, all the target compounds showed moderate to excellent antitumor activity against H460, MDA-MB-231, HT-29, MKN-45, U87MG, and SMMC-7721.

c-Met Kinase Assay:

c-Met kinase activity was measured with an ELISA reader.

To the plate filled with 0.25 mg/mL PGT, the compounds, 50 pM c-Met (His-tagged recombinant human Met (Amino acids 974-ends), by baculovirus expression) and 5 μM ATP in buffer solution (25 mM MOPS, pH 7.4, 5 mM MgCl₂, 0.5 mM MnCl₂, 100 μM sodium orthovanadate, 0.01% Triton X-100, 1 mM DTT, 1% of DMSO (v/v)) was added, the solution was incubated for 20 min. The reaction mixture was removed by washing with 0.2 μg/mL conjugated horseradish peroxidase (HRP) monoclonal antibody specific for phosphotyrosine (PY20) detecting phosphorylation of the substrate polymer. 1M phosphoric acid was added to terminate the color, the chromogenic substrate (TMB) was tested by

spectrophotometry at 450 nm. The c-Met kinase inhibition data was illustrated in Table 2.

It can be clearly seen from the above test results, the protected compounds in formula I in this invention, have good anti-tumor activity in vitro, and are better than the anticancer drug cisplatin.

Compounds of Formula I in the invention may be used alone, but usually given with a pharmaceutically acceptable carrier, which is selected according to the desired route of administration and standard pharmaceutical practice, the following preparation methods of such various pharmaceutical

61

dosages (tablets, capsules, injections, aerosols, suppositories, films, pills, liniment, topical ointments) were used to describe new application in the pharmaceutical field.

Example 71

Tablet

10 g compound (e.g., the compound of Example 12) containing the compound of claim 1 was mixed homogeneously with 20 g adjuvants and tableted into 100 tablets by general compression method, 300 mg each tablet.

Example 72

Capsule

10 g compound (e.g., the compound of Example 36) containing the compound of claim 1 was mixed homogeneously with 20 g adjuvants according to the requirements of pharmaceutical capsules, and filled into empty capsules, 300 mg each capsule.

Example 73

Injection

10 g compound (e.g., the compound of Example 1) containing the compound of claim 1 was absorbed by activative charcoal by conventional pharmaceutical method, filtered through 0.65 μ m microporous membrane and filled into nitrogen bottle to prepare water injection preparation, 2 mL each bottle, and 100 bottles in total.

Example 74

Aerosol

10 g compound (e.g., the compound of Example 22) containing the compound of claim 1 was dissolved with a suitable amount of propylene glycol, and added with distilled water and other adjuvants to get 500 mL clear solution.

Example 75

Suppository

10 g compound (e.g., the compound of Example 19) containing the compound of claim 1 was grinded and a suitable amount of glycerol was added and mixed homogeneously. Then melt glycerol gelatin was added and grinded homogeneously, and the mixture was poured into a mold coated with lubricant to produce 50 suppository particles.

Example 76

Film

10 g compound (e.g., the compound of Example 13) containing the compound of claim 1 was mixed and expanded with polyvinyl alcohol, pharmaceutically acceptable glycerol, water etc., and dissolved by heating. After filtration on an 80 mesh screen, the compound of Example 18 was added to the filtrate and dissolved therein by agitation. 100 films were produced by coater machine.

62

Example 77

Dripping Pill

10 g compound (e.g., the compound of Example 17) containing the compound of claim 1 was mixed homogeneously with 50 g substrate such as gelatin by heating and melting, then the mixture was dropped into a liquid paraffin at low temperature. 1000 pills of dripping pill were produced.

Example 78

Liniment for External Use

10 g compound (e.g., the compound of Example 31) containing the compound of claim 1 was mixed and ground with 2.5 g adjuvants such as emulsifier by conventional formulation methods, then 200 mL water was added to prepare the liniment for external use.

Example 79

Ointment

10 g compound (e.g., the compound of Example 47) containing the compound of claim 1 was ground and then mixed homogeneously with 500 g oleaginous base such as Vaseline.

Although the present invention has been described through specific embodiments, but modifications and equivalent changes to those skilled person in this field are apparent, and they are included within the scope of the invention.

What is claimed is:

1. A compound of formula I or a pharmaceutically acceptable salt, hydrate, solvate or prodrug thereof,

wherein:

P is F or H;

X is O, S, NH or NCH₃;

Z is N or CH;

Y is N or CH;

n is an integer between 1 and 6;

R₁ and R₂, which are same or different, are selected independently from the group consisting of H, (C₁-C₁₀) alkyl, (C₃-C₇) cycloalkyl, (C₂-C₁₀) alkenyl and (C₂-C₁₀) alkynyl, wherein said alkyl, cycloalkyl, alkenyl and alkynyl are optionally substituted with 1 to 3 same or different R₄;

63

or R₁ and R₂ are covalently bonded together with the nitrogen to which they are attached to form 5- to 10-membered heterocyclic radical or 5- to 10-membered heteroaryl radical, said heterocyclic radical or heteroaryl radical may have optionally 1 to 4 heteroatoms selected from N, O, and S except the nitrogen atom to which R₁ and R₂ are attached, said heterocyclic radical may optionally have 1 to 2 carbon-carbon double bond or triple bond, said heterocyclic and heteroaryl radicals can be optionally substituted with 1 to 3 same or different R₄;

R₄ is (C₁-C₄) alkyl, (C₁-C₄)alkoxyl, halogen, hydroxyl, cyano, carboxyl, or an ester group;

R₃ is hydrogen or 1 to 3 substituents selected independently from the group consisting of hydroxyl, halogen, nitro, amino, cyano, (C₁-C₆) alkyl, (C₂-C₆) alkenyl, (C₂-C₆) alkynyl, (C₁-C₆) alkoxy, (C₁-C₆) alkylsulfanyl, (C₁-C₆) alkyl or (C₁-C₆) alkoxy or (C₁-C₆) alkylsulfanyl substituted optionally with hydroxyl, amino or halogen, amino substituted with 1 or 2 (C₁-C₆) alkyl, (C₁-C₆)alkylamido, carboxy group which can be free, salts, or form ester group, (C₁-C₆) alkylsulfanyl, sulfonyl, (C₁-C₆)alkylacyl, aminoformyl, aminoformyl substituted with 1 or 2 (C₁-C₆) alkyl, and (C₁-C₃)alkylenedioxy;

Ar represents (C₆-C₁₀) aryl, or 5- to 10-membered heteroaryl radical, wherein said heteroaryl radical may have 1 to 3 heteroatom(s) selected from N, O, and S, and Ar can be optionally substituted with 1 to 3 same or different R₅;

R₅ is hydroxyl, halogen, nitro, amino, cyano, (C₁-C₆) alkyl, (C₂-C₆) alkenyl, (C₂-C₆) alkynyl, (C₁-C₆) alkoxy, (C₁-C₆) alkyl or (C₁-C₆) alkoxy optionally substituted with hydroxyl, amino or halogen, amino substituted with 1 or 2 (C₁-C₆) alkyl, carboxy group which can be free, salts, or form ester group, (C₁-C₆) alkylsulfanyl, sulfonyl, (C₁-C₆) alkoxy (C₁-C₆) alkyl, (C₁-C₆)alkylacyl, aminoformyl, aminoformyl substituted optionally with 1 or 2 (C₁-C₆) alkyl, or (C₁-C₃)alkylenedioxy.

2. The compound of formula I, or a pharmaceutically acceptable salt, hydrate, solvate or prodrug thereof according to claim 1, wherein,

P is F;

X is O or NH;

n is an integer between 1 and 4;

64

R₁ and R₂, which are the same or different, are selected independently from the group consisting of H, (C₁-C₆) alkyl, (C₃-C₆)cycloalkyl, (C₂-C₆) alkenyl and (C₂-C₆) alkynyl, wherein said alkyl, cycloalkyl, alkenyl and alkynyl are optionally substituted with 1 to 3 same or different R₄;

or R₁ and R₂ are covalently bonded together with the nitrogen to which they are attached to form 5- to 10-membered heterocyclic radical, said heterocyclic radical may have optionally 1 to 4 heteroatoms selected from N, O, and S except the nitrogen atom to which R₁ and R₂ are attached, said heterocyclic radical may optionally have 1 to 2 carbon-carbon double bond or triple bond, said heterocyclic radical can be optionally substituted with 1 to 3 same or different R₄;

R₄ is (C₁-C₄) alkyl, (C₁-C₄)alkoxyl, halogen, hydroxyl, cyano, carboxyl, or an ester group;

Ar represents phenyl, naphthyl, or 5- to 10-membered heteroaryl radical, wherein said heteroaryl radical may have 1 to 3 heteroatom(s) selected from N, O, and S, and Ar can be optionally substituted with 1 to 3 same or different R₅.

3. The compound of formula I, or a pharmaceutically acceptable salt, hydrate, solvate or prodrug thereof according to claim 2, wherein:

X is O;

R₁ and R₂, which are the same or different, are selected independently from the group consisting of (C₁-C₆) alkyl, and (C₃-C₆)cycloalkyl, wherein said alkyl, cycloalkyl are optionally substituted with 1 to 3 same or different R₄;

or R₁ and R₂ are covalently bonded together with the nitrogen to which they are attached to form 5- to 6-membered heterocyclic radical, said heterocyclic radical may have optionally 1 to 4 heteroatoms selected from N, O, and S except the nitrogen atom to which R₁ and R₂ are attached, said heterocyclic radical may optionally have 1 to 2 carbon-carbon double bond or triple bond, said heterocyclic radical can be optionally substituted with 1 to 3 same or different R₄.

4. The compound of formula I, or a pharmaceutically acceptable salt, hydrate, solvate or prodrug thereof according to claim 3, wherein:

R₁ and R₂ are covalently bonded together with the nitrogen to which they are attached to form 5- to 6-membered saturated heterocyclic radical, said saturated heterocyclic radical may have optionally 1 to 4 heteroatoms selected from N, O, and S except the nitrogen atom to which R₁ and R₂ are attached, said saturated heterocyclic radical can be optionally substituted with 1 to 3 same or different R₄;

R₄ is (C₁-C₄)alkyl;

R₃ is hydrogen or 1 to 3 substituent(s) optionally selected from halogen, (C₁-C₄) alkyl, (C₁-C₄) alkoxy, trifluoromethyl, and trifluoromethoxy;

Ar represents phenyl, naphthyl, quinolyl, pyridyl, furyl, thienyl or pyrrolyl, wherein Ar can be optionally substituted with 1 to 3 same or different R₅;

R₅ is halogen,

(C₁-C₄) alkyl,

(C₁-C₄) alkoxy,

(C₁-C₄) alkyl or (C₁-C₄) alkoxy optionally substituted with halogen, amino substituted with 1 or 2 (C₁-C₆) alkyl,

(C₁-C₄) alkoxy(C₁-C₄) alkyl,

(C₁-C₆)alkylacyl,

aminoformyl,

65

aminoformyl substituted with 1 or 2 (C₁-C₆) alkyl, or (C₁-C₃)alkylenedioxy.

5. The compound of formula I, or a pharmaceutically acceptable salt, hydrate, solvate or prodrug thereof according to claim 4, wherein:

R₁ and R₂ are covalently bonded together with the nitrogen to which they are attached to form 1-piperidino, 4-morpholino, 4-methyl-1-piperazinyl, 1-piperazinyl, 4-methyl-1-piperidino, 1-pyrrolidinyl, or 4-sulfomorpholino; Ar represents phenyl or phenyl optionally substituted with 1 to 3 same or different R₅.

6. The compound of general formula I, or a pharmaceutically acceptable salt, hydrate, solvate or prodrug thereof according to claim 5, wherein,

Z is N.

7. The compound of formula I, or a pharmaceutically acceptable salt, hydrate, solvate or prodrug thereof according to claim 5, wherein:

Z is CH.

8. The compound of formula I, or a pharmaceutically acceptable salt, hydrate, solvate or prodrug thereof according to claim 7, wherein:

Y is CH.

9. The compound of formula I, or a pharmaceutically acceptable salt, hydrate, solvate or prodrug thereof according to claim 7, wherein:

Y is N.

10. The compound of formula I, or a pharmaceutically acceptable salt, hydrate, solvate or prodrug thereof according to claim 9, wherein:

R₁ and R₂ are covalently bonded together with the nitrogen to which they are attached to form 1-piperidino, 4-morpholino, 4-methyl-1-piperazinyl, 4-methyl-1-piperidino, or 1-pyrrolidinyl; n is 3;

R₃ is hydrogen;

Ar represents phenyl or phenyl optionally substituted with 1 to 3 same or different R₅;

R₅ is halogen, (C₁-C₄) alkyl, (C₁-C₄) alkoxy, trifluoromethyl or trifluoromethoxy.

11. The compound of formula I, or a pharmaceutically acceptable salt, hydrate, solvate or prodrug thereof according to claim 10, wherein:

R₅ is F, Cl or trifluoromethyl.

12. The compound of formula I, or a pharmaceutically acceptable salt, hydrate, solvate or prodrug thereof according to claim 1, wherein the compound of general formula I is selected from the following compounds:

N-(3-fluoro-4-((6-methoxy-7-(3-(pyrrolidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2-(trifluoromethyl)phenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(piperidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2-chlorophenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(piperidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(4-bromophenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(morpholin-4-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2-(trifluoromethyl)phenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(piperidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2-(trifluoromethyl)phenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(piperidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(3-(trifluoromethyl)phenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(piperidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2-fluorophenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(4-methylpiperazin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2-(trifluoromethyl)phenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(piperidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(3-fluorophenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(piperidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(4-chlorophenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(piperidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(3,4-difluorophenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(pyrrolidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(3,4-difluorophenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(4-methylpiperidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(4-fluorophenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(4-methylpiperidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2-fluorophenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(4-methylpiperidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2-chlorophenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(pyrrolidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2-chlorophenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(4-methylpiperazin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2-chlorophenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(pyrrolidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2-bromo-4-fluorophenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(4-methylpiperazin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2-bromo-4-fluorophenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(piperidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2-chloro-5-(trifluoromethyl)phenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(4-methylpiperidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2-chloro-5-(trifluoromethyl)phenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(pyrrolidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2-chloro-5-(trifluoromethyl)phenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(4-methylpiperazin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2-chloro-5-(trifluoromethyl)phenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(4-methylpiperidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2,4-dimethylphenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(pyrrolidin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2,4-dimethylphenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(4-methylpiperazin-1-yl)propoxy)quinolin-4-yl)oxy)phenyl)-1-(2,4-dimethylphenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(morpholin-4-yl)propoxy)cinnolin-4-yl)oxy)phenyl)-1-(4-bromo-2-fluorophenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide;

N-(3-fluoro-4-((6-methoxy-7-(3-(4-methylpiperazin-1-yl)propoxy)cinnolin-4-yl)oxy)phenyl)-1-(4-fluorophenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide; 5

N-(3-fluoro-4-((6-methoxy-7-(3-(pyrrolidin-1-yl)propoxy)cinnolin-4-yl)oxy)phenyl)-1-(2,4-dichlorophenyl)-4-oxo-1,4-dihydrocinnoline-3-carboxamide.

15. A pharmaceutical composition, comprising the compound or pharmaceutically acceptable salt and/or hydrate, solvate, or prodrug thereof according to claim 1 as active ingredient and pharmaceutically acceptable excipient. 10

16. A method for treating a proliferative disease in a patient, comprising administering to the patient the compound of claim 1, wherein said proliferative disease is psoriasis, benign prostatic hypertrophy, atherosclerosis, or restenosis. 15

17. A method for treating cancer in a patient, comprising administering to the patient the compound of claim 1, wherein said cancer is lung cancer, liver cancer, gastric cancer, colon cancer, or breast cancer. 20
